

GSM VOIP GATEWAY

GB 400 010 with GSM module
Two-way converter between VoIP and GSM

User Guide

LEVEL

Dear customers,

Congratulations on purchasing our product - GSM Gateway GB 400 010. You have acquired high quality and highly professional product.

GSM gateway GB 400 010 enables to save costs on phone calls by connecting call from your VoIP device (VoIP PBX or VoIP phone) to the GSM network and vice versa – to enable mobile number calls to be connected from GSM to VoIP.

The most significant savings with VoIP GSM gateway GB 400 010 can be achieved especially:

- By purchasing a SIM with a flat rate or very low calling rate between numbers inside a group.
- For international calls, where you can cross the borders with free call over VoIP, you will only pay the national charge of GSM to GSM calls. This can be very useful especially for companies with branches abroad.

Please read this User Guide carefully before putting the gateway into operation. It provides not only the information about correct installation and operation of this product but it will also help you use all the technical features.

1. Introduction

GB 400 series products provide you the best connect solution for heterogeneous network including WLAN GSM or PSTN. You may use a SIP-protocol VoIP phone or software to connect to the GB 400, then reach this call to the mobile network, and vice versa. With multiple sets of GB 400, you may even build an international call network.

2. Functions

- VoIP (SIP)-GSM conversion.
- Voice response for setting and status enquiring. (Dial in GSM numbers of GB 400 to get voice information or to operate.)
- 50 sets of LAN->MOBILE routing, and 50 sets of MOBILE->LAN routing.
- Series connections to save bills.
- Standard SIP (RFC2543, RFC3261) protocol to communicate with other gateways or PC.
- Settings and managing via web page

3. The contents in package

- GB 400 gateway
- AC-DC Adaptor (220V AC – 12V DC)
- Network cable
- Antenna
- User's Manual

4. Panel description

- PWR: Power indicator light. Light is on when system's power supply is normal.
- GSM: GSM indicator light. Light flashes when GSM status is normal; light turns on constantly when GSM is called.
- LAN: LAN indicator light. Light flashes when Lan is called; light turns off when GSM answers.
- LINK: Link indicator light. Light is on when network is connected correctly.

5. Accessory attachment

- Connect the network cable both to your Hub and to LAN socket of GB 400.
- Connect the antenna and place it in a good receiving location (not too close to the device).
- Insert a SIM card into left bank of GB 400 and close the cover.

- Plug the adapter in DC 12V socket and PWR socket. The PWR light should turn green at the moment.
- Click reset button 3 sec. GB 400 will restore default IP. Other setting as usual.

6. Setting and managing via web page

The default IP address of GB 400 is http://192.168.0.100. Before accessing the web page, please confirm this address is available in your network.

Enter the default username and password to login.

Default username: voip

Default password: 1234

7. System Information

After login, you could see the system information such as: model name, firmware version, codec version name, etc. in this page.

GSM VoIP v6.0	
This page illustrate the system related information.	
Company:	LEVEL Ltd.
Model Name:	GB 400 010
Firmware Version:	Mon Nov 12 15:17:30 2007.
Codec Version:	Mon Jul 24 10:55:05 2006.
Tel:	+420 491 44 66 11
Fax:	+420 491 44 66 44
Web Site:	http://www.levelna.cz

You could also see the setting table in the left side. Please click on the option you would like to set. The setting methods are indicated as the following chapters, please input the value or select the item according to your situation.

Note:

Please remember to save change whenever you submit any setting. Click “Save Change” then “Save” button, the system will restart and make the changed function/setting operative.

Add New

Position: (0~49)

CID: Ex:09111111111, 0911*, *

URL: Ex:192.168.0.1, *2St

Add
Reset

When the GSM number of the GB 400 is called, this device transfers the call to URL according to the caller ID of the incoming call.

8.1.1 CID: caller ID, the numbers of incoming call

You could set the CID as the following formats:

- The complete number, e.g. 0911111111
- The prefix part plus *, e.g. 0911*. This format means any number starting with 0911 will be accepted to transfer.
- *, this means any incoming call is accepted to transfer.
- N, this means the incoming call without showing its CID is accepted to transfer.

Please note the priority of the routing rules; the CID with more digits gets the priority.

8.1.2 URL The IP address of destination

You could set the URL as the following formats:

- The complete IP address, e.g. 192.168.0.101
- The proxy extension numbers
- The phone numbers.

Note:

If the device has registered at proxy server/Asterisk, you can enter any destination phone number. Also note that in the proxy server/Asterisk, you need to set the route of destination phone number.

Leave it blank or 'N', this mean to refuse to transfer.

*, this means to transfer via 2-stage-dialing. The call will be answered with a prompt dial tone for the caller to press the IP address, proxy extension, or any phone number as destination. The caller press the IP address on the phone keys: 192*168*0*101# as 192.168.0.101

Example of Mobile to Lan setting:

- Mobile to Lan: 0932*, 0911123456
When the GSM numbers of the device is called, if the caller's prefix numbers are 0932, GB 400 transfers the call to 0911123456, then 0911123456 rings (while available).
Precondition:
a) GB 400 has registered at proxy server/Asterisk
b). The proxy server/Asterisk has the route of "09"
- Mobile to Lan: *, *

Any incoming call gets a prompt dial tone; so the caller can enter any IP address, sip extension, or phone number.

Precondition:

- a) SIP extension or phone number needs to register at SIP Proxy Server or Asterisk.
- b) Phone number, SIP Proxy Server or Asterisk needs to set the route of destination phone number.

8.2. Mobile to LAN Speed Dial Settings

When you set both Mobile to LAN Speed Dial Settings and Mobile to LAN settings at the same time, Mobile to LAN Speed Dial Settings gets higher priority. Mobile to Lan setting will be not available.

LEVEL[®]

Mobile To LAN Speed Dial

You could set the speed dial in this page.

Num	Name	URL	Select
0	pokus	491446637	<input type="checkbox"/>
1			<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

Add New Phone

Position: (0~9)

Name:

URL:

The call is answered with a prompt dial tone for the caller to press the “Num”, and then the device connects the “URL” as destination.

Example: after you call the GSM number of the device and hear a dial tone, you press 0, then the lan phone of IP address: 192.168.0.107 rings.

8.3. LAN to Mobile Settings

In this page: Lan To Mobile able, you could set the routing rules to transfer the calls incoming from Lan to Mobile. Maximum 50 sets.

URL: Ex:192.168.0.1, 192.168.0.*

Call Num: Ex:0911, *.2St, #, #d?, #d?A??:1St

Add
Reset

When the Lan of the GB 400 is called, this device transfers the call to Call Num according to the URL of the incoming call.

8.3.1. URL: The IP address or proxy extension numbers of the incom. call.

You could set the URL as the following formats:

- The complete IP address, e.g. 192.168.0.101
- The proxy extension numbers, e.g. 103

- Part of an IP address plus *, e.g. 192.168.0.*. This means the IP address starting with 192.168.0 would be accepted to transfer,
- Part of the proxy extension numbers plus, e.g. 10*. This means the extension numbers starting with 10 would be accepted to transfer.

8.3.2. Call Num: the phone numbers of destination.

You could set the Call Num as the following formats:

- The complete number, e.g. 0911111111
- *, this means to transfer via 2-stage-dialing. The call will be answered with a prompt dial tone for the caller to press the destination phone numbers, e.g. 0911111111
- #, this allow the caller with lan phone dial directly the destination numbers.
Precondition:
 - a) GB 400 and incoming lan Phone are both registered at proxy server or Asterisk.
 - b) Proxy server/asterisk has set the routing rules to assign specific prefix of numbers to be transferred from GB 400.
 - c) Lan to Mobile routing sets: *, #
Usage: You could dial on your lan phone call any destination number with prefix of "09". When your lan phone and GB 400 had registered and "09" prefix is setted the routing rules at proxy server or Asterisk.
 - d) #[d'n][a'ppp], this means to do the above routing, and to modify the numbers.

Note:

'd'n means to delete the number of prefix,
'a'ppp means to add 'ppp' prefix.

E.g. #d2a09 means to call the registered numbers via one-stage-dialing. The numbers are modified to: delete 2 digits of prefix of the original numbers, then add 09 to be new prefix of the destination numbers.

9. Mobile

9.1. Mobile Status

In this page: Mobile Status, you could get the information of your GSM network and the latest operation.

Mobile Status

2833
 Inband DTMF
 Send DTMF SIP Info

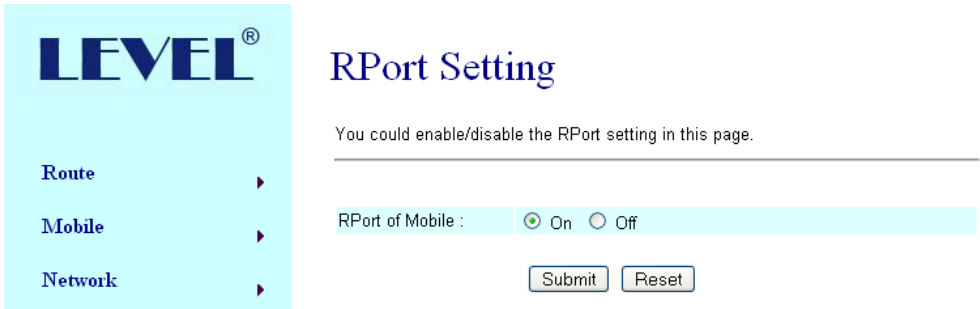

Mobile DTMF debounce: (range:40~200, default:80) step:10ms.

Note:

If this device has registered at SIP Proxy Server/Asterisk, please select “2833”. If not, please select “Inband DTMF”.

11.6. RPort Setting

You can setup the RPort Enable/Disable according to your ISP information. After setting, remember to click the Submit button.

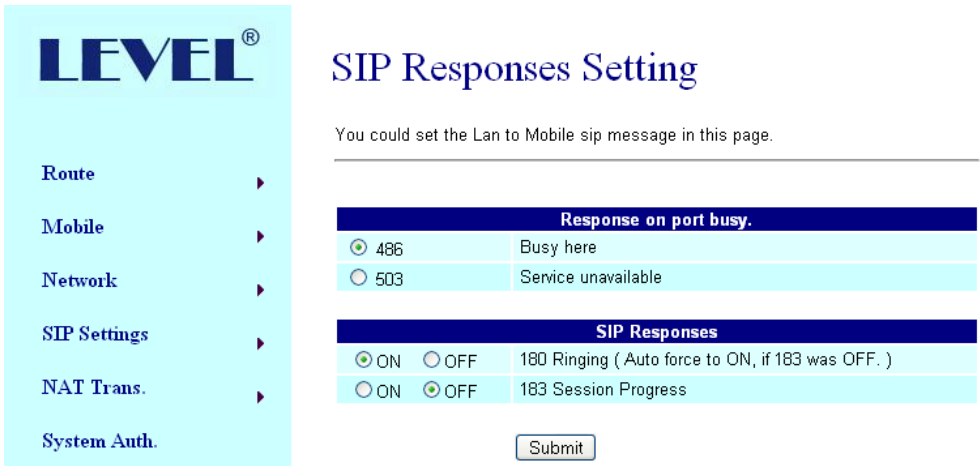

LEVEL[®]

RPort Setting

You could enable/disable the RPort setting in this page.

RPort of Mobile : On Off

11.7. SIP Setting: SIP Responses

LEVEL[®]

SIP Responses Setting

You could set the Lan to Mobile sip message in this page.

Response on port busy.	
<input checked="" type="radio"/> 486	Busy here
<input type="radio"/> 503	Service unavailable

SIP Responses	
<input checked="" type="radio"/> ON <input type="radio"/> OFF	180 Ringing (Auto force to ON, if 183 was OFF.)
<input type="radio"/> ON <input checked="" type="radio"/> OFF	183 Session Progress

- 486(busy here), 503(Service unavailable): When Device are busying, you can select 486 or 505 to response to SIP.
- 180 Ring on/off: LAN TO MOBILE two stage dialing can be turn off, therefore there will be no the Ring Back Tone, all the phone call will be transferred to Voice-Mail directly. (For this function, 183 must be turn on)
- 183(Session Progress)-->[It means"on progressing"] : When you turn 183 on, it means you can hear voicemail while GMS side are busying. We recommend you to turn this on if you use SIP Proxy.

11.8. Other Settings

You could setup the RFC and QoS according to your ISP information. After setting, remember to click the Submit button.

The QoS setting is to set the voice packets' priority. If you set the value higher than 0, then the voice packets get the higher priority to the Internet. But the QoS function still need to cooperate with the others Internet devices.

Other Settings

You could set other settings in this page.

Hold by RFC of Mobile :	<input type="radio"/> On	<input checked="" type="radio"/> Off
Voice QoS:	<input type="text" value="40"/>	(0~63)
SIP QoS:	<input type="text" value="40"/>	(0~63)
SIP Expire Time:	<input type="text" value="300"/>	(60~86400 sec)

12. NAT Trans

In this page: NAT Trans./ STUN, you could setup the STUN Enable/Disable and STUN Server IP address. This function helps your VoIP device work properly behind NAT. Change these settings according to your ISP information. After setting, remember to click the Submit button.

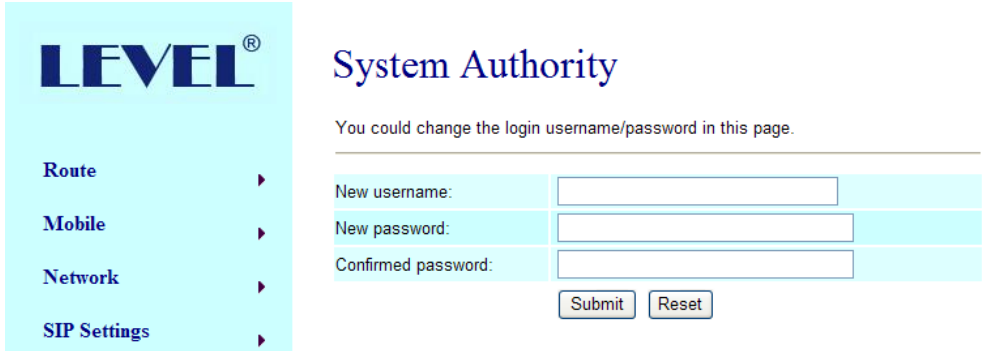

STUN Setting

You could set the IP of STUN server in this page.

STUN of Mobile :	<input type="radio"/> On	<input checked="" type="radio"/> Off
STUN Server:	<input type="text" value="stun.xten.com"/>

Mobile ▶

Restore Default Settings

You could click the restore button to restore the factory settings.

Restore default settings:

16. Reboot

In this page, you could click the Reboot button to restart the system.

Route ▶

Mobile ▶

Reboot System

You could press the reboot button to restart the system.

Reboot system:

17. Setting and checking via IVR

User could get or set some parameters of the system by dialing in the mobile numbers of the device. The status or result is reported via voice response system. In the first 20 seconds after power-on (when only Mobile light flash), you could dial its mobile numbers. When you hear the dial tone, press the following codes to set or check the device.

Function	Code	Action
Reboot	#195#	Reboot the device
Factory Reset	#198#	Return to default settings
Check IP Address	#120#	IVR announces the current IP address. Default: 192.168.0.100
Check IP Type	#121#	IVR announces DHCP is on or off. Default: off
Check Network Mask	#123#	IVR announces the current network mask. Default: 255.255.255.0
Check Gateway IP Address	#124#	IVR announces the current gateway IP address. Default: 192.168.0.254
Check Primary DNS Server	#125#	IVR announces the current setting in the Primary DNS field. Default: 192.168.0.1
Check Firmware Version	#128#	IVR announces the version of the firmware.
Set as DHCP client	#111#	The system is changed to DHCP Client type
Set Static IP Address	#112xxx*xxx*xxx*xxx#	DHCP is disable and system is changed to static IP type. Enter IP address using numbers on the telephone keypad. Use the * (star) key when entering a decimal point.
Set Network Mask	#113xxx*xxx*xxx*xxx#	Must set Static IP first. Enter value using numbers on the telephone keypad. Use the * (star) key when entering a decimal point.
Set Gateway IP Address	#114xxx*xxx*xxx*xxx#	Must set Static IP first. Enter IP address using numbers on the telephone keypad. Use the * (star) key when entering a decimal point.
Set Primary DNS Server	#115xxx*xxx*xxx*xxx#	Must set Static IP first. Enter IP address using numbers on the telephone keypad. Use the * (star) key when entering a decimal point.
